Abstract

- 5 A method of granting, to a user communications device,  
access to a service provided by a plurality of service  
communications devices where an access key code is  
generated during an initial communications session  
10 between the user communications device and one of the  
service communications devices. The established access  
key code is subsequently stored in the user  
communications device and made available to the service  
communications devices for use in subsequent  
communications sessions between the user communications  
15 device and any one of the service communications devices.  
The invention further relates to a communications system  
and a user communications device.
